

Project Milestone 3

Team Members: Tristan Thomas, Vincent Zagala, Brian Lemay, Benjamin Dashiell, Casey An

Completed Features:

Two features-

- Landing page: **Vincent, Casey, Benjamin**
 - General Layout
 - Navbar
 - Login? -> setup, not linked to the server
- Candidate page: **Tristan & Brian**
 - Photo of candidate
 - Short bio/ campaign slogan
 - Link to their website
 - Twitter Link

Demo:

Two application features in-progress of being implemented. We had the HTML for both the landing page and the candidate information page. We had the framework for the login page for general users and delegates and our election results graph page in place but not implemented.

Suggestions:

The primary suggestion for the project was that we begin to implement the backend database and start tying it in with the intermediate layer. The layout and design of the functions to be laid out was good, but the functionality needs to begin to take shape. As functions and features become refined we need to ensure they function as designed and make sense for the intended design of the website.
