

Project Milestone 5

Team Members: Tristan Thomas, Vincent Zagala, Brian Lemay, Benjamin Dashiell, Casey An

The three features we will be testing

1. Voter Delegate Graph
 - a. Test Case 1:
 - i. Delegate pool casts their votes for a specific candidate and updates the results graph in real-time. Delegate votes will be transmitted to our graph API and results will be compiled as they come in.
 - b. Test Case 2:
 - i. Delegate logs back in and changes their vote to another candidate, results graph is updated. Voter ID assigned to a specific delegate will transmit updated vote to our API and the real-time tally will be updated.
2. Candidate Event Schedule
 - a. Test Case 1:
 - i. The user clicks on a candidate and it shows the information about the candidate's events.
 - b. Test case 2:
 - i. The user will submit either going or not going and a counter will display the number of users going. Javascript reading the database of how many people will be attending the event.
3. User Registration Feature
 - a. Test Case 1: A new user can create an account on our website.
 - i. The user can add in their login information (name, email, password).
 - ii. The user's information is transmitted and populated into the backend of the server.
 - b. Test Case 2: A user can log in after creating an account
 - i. If a user enters incorrect login information, the website will display a message saying "incorrect username/password". Users can attempt to log in again.
